

# LLDB MCP

Jonas Devlieghere

# Generative AI

## AI as a Feature

Traditional tools gain AI capabilities

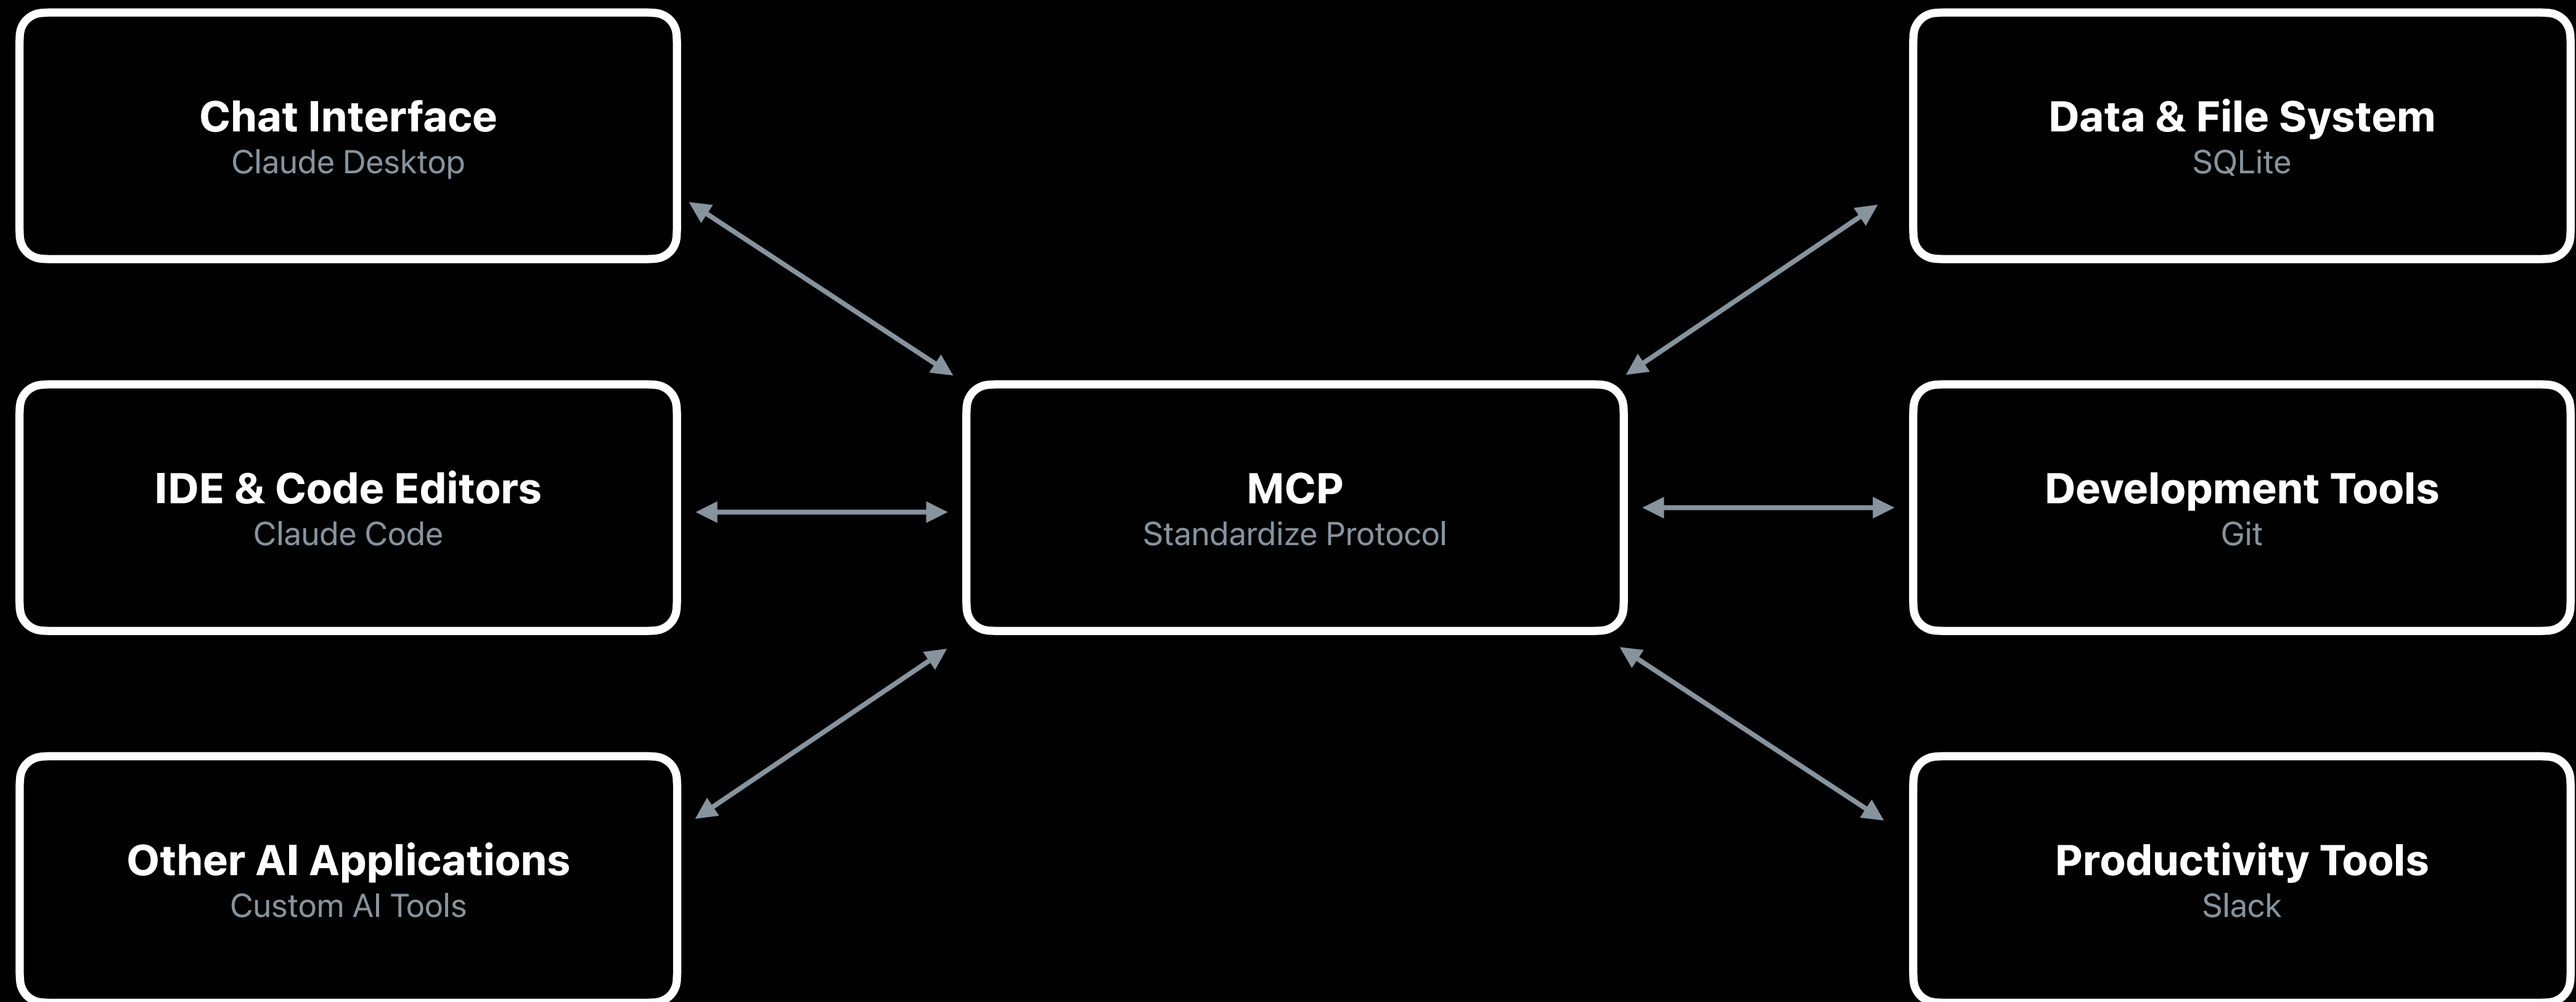

*Automatically explain crashes based  
on the backtrace*

## AI as Orchestrator

AI gains traditional tool capabilities

*Step through a loop until it does  
something special*

# Model Context Protocol

# MCP Server

## Resource

File-like data that  
can be read by  
clients

## Tool

Functions that can  
be called by the  
LLM

## Prompt

Templates that help  
users accomplish  
specific tasks

```
{  
  "name": "command",  
  "description": "Run any lldb command.",  
  "inputSchema": {  
    ...  
  }  
}
```

## Resources

```
{  
  "name": "debugger #1",  
  "uri": "lldb://debugger/1",  
  "description": "<description of debugger #1>",  
},  
{  
  "name": "target #0",  
  "uri": "lldb://debugger/1/target/0",  
  "description": "<description of target #0>",  
}
```

# Connecting to LLDB MCP

```
$ claude mcp add --transport stdio LLDB /path/to/lldb-mcp
```

# Connecting to LLDB MCP

```
(lldb) protocol-server start MCP listen://localhost:59999
```

```
MCP server started with connection listeners: connection://[::1]:59999,  
connection://[127.0.0.1]:59999
```
